Hiring Team & Product Leadership
Aerobotics7 Inventions Pvt. Ltd. (A7)
Remote — India

SUBJECT: Application for Mid-Level UI/UX Designer — Real-Time Operator Dashboards & Sensor Telemetry

Dear Aerobotics7 Team,

I am writing to express my strong enthusiasm for the **Mid-Level UI/UX Designer** role at Aerobotics7 (A7). Aerobotics7's mission — developing autonomous sensing and AI platforms to detect, identify, and mitigate critical threats like landmines, UXOs, and IEDs in real time — requires interfaces where cognitive clarity, low-latency data presentation, and rapid operator decision-making are life-saving essentials. With 5+ years designing real-time telemetry dashboards, operations control software, and component-based design systems, I am excited to help craft intuitive operator experiences for your deep-tech sensing platforms.

My experience bridges human-centered interface aesthetics, complex multi-modal telemetry architectures, and production frontend engineering:

- **Multi-Sensor Telemetry & Operator Dashboards:** For clean-tech platform *iRasus*, I designed real-time EV battery pack health monitoring dashboards, transforming high-frequency multi-sensor streams (State of Health, temperature thresholds, voltage deltas) into actionable alerts and visual status boards that operators can interpret in seconds. Similarly, for *IndiaOne ATM*, I mapped complex dual-role replenishment and hardware diagnostics workflows across distributed rural operations.
- **Component-Driven Design Systems & Developer Handoff:** I build scalable, tokenized design systems in Figma (auto-layouts, component variants, spacing tokens, responsive grids) and document component specifications for seamless engineering handoff. Because I understand React, TypeScript, and CSS architecture, I bridge the gap between design vision and technical implementation — ensuring pixel-perfect delivery alongside frontend developers, AI engineers, and robotics teams without handoff ambiguity.
- **Rapid Prototyping & Startup Velocity:** As Co-Founder of product studio Commerce Agents, I have led 0→1 digital experiences from initial discovery to live production. Using modern AI-assisted prototyping workflows (Cursor, Antigravity) alongside modular code architectures, I rapidly translate ambiguous requirements into interactive, testable prototypes to validate user flows under real-world constraints before code lock-in.

Whether simplifying multi-layered geospatial feeds, architecting responsive operator screens across desktop, tablet, and mobile, or establishing unified design tokens for your engineering team, I bring the technical depth and design craftsmanship required to make complex autonomous intelligence intuitive.

I would welcome the opportunity to discuss how my dashboard design and engineering background can support Aerobotics7's product roadmap. Thank you for your time, consideration, and impactful mission.

Sincerely,

Santhosh A
Product Designer & Design Engineer
