To the Hiring Team & Practice Leadership
Customer Team | Advertising, Marketing & Commerce (AM&C)
Deloitte Consulting India (USI)

Subject: Application for Senior Product Specialist - Business Experience Designer (Job Requisition #358112)

Dear Deloitte Consulting Team,

I am writing to express my strong interest in the **Senior Product Specialist - Business Experience Designer** role within Deloitte Consulting USI's Customer / Advertising, Marketing & Commerce (AM&C) practice. With over 6 years of experience operating at the intersection of business strategy, human-centered design, and production frontend engineering, I specialize in taking ambiguous enterprise challenges and transforming them into validated, high-conversion digital products.

My titles have been design and engineering roles, but I've owned product decisions end to end at Commerce Agents.

Deloitte's AM&C practice is known for driving transformative growth by harmonizing customer desirability, technological feasibility, and commercial viability. My background directly aligns with what this role demands:

- **Framing Ambiguity into Testable Hypotheses:** At Commerce Agents, when building Sivakasi's first food ordering platform (Vidya's Kitchen), a conventional menu-driven WhatsApp bot failed on conversational sentences. Rather than guessing, I framed this into testable bets: shipping two distinct doors (a mobile PWA and a one-sentence WhatsApp ordering channel), with AI drafting orders while deterministic server logic controlled pricing. Every misroute was captured and reproduced in tests before being verified as resolved.
- **Client Partnerships & Validated Impact:** At Parla Retail, I worked directly with NFM's US clients to gather feedback and feature requirements to solve showroom drop-offs for high-value merchandise. By designing the Show & Sell consultation experience (video, screen-sharing, in-call checkout) and an integrated appointment scheduler with calendar sync and automated reminders, our pilot funnels achieved a **+31% lift in booking completion and a −26% drop-off reduction** (directional, measured against early wireframe benchmarks).
- **Rapid AI-Assisted Prototyping in Working Code:** Rather than passing static wireframes across siloed handoffs, I build functional, high-fidelity prototypes in production-grade code (Next.js, TypeScript, Tailwind CSS) using AI-assisted tooling including Cursor, Claude Code, GitHub Copilot, and Antigravity. This allows client stakeholders and engineering teams to experience interactive workflows firsthand within days, drastically shortening the feedback loop.
- **Responsible AI & Human-in-the-Loop Governance:** For We Two Pets (wetwopets.com), I architected an editorial pet platform powered by an autonomous AI catalog gap engine paired with a mandatory 2-human curation voting desk before publishing to reduce hallucination risk, ensure product legitimacy, and verify Indian market inventory availability.

With a B.Tech in Information Technology from Loyola-ICAM College of Engineering and Technology, a continuous history of mentoring 100+ students at FITA Academy, and extensive hands-on experience driving 0→1 product decisions alongside engineering squads, I look forward to bringing high-velocity prototyping and strategic business experience design to Deloitte's global client engagements.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my experience and technical design skillset can accelerate the objectives of the AM&C team.

Sincerely,

Santhosh A
