To the Hiring Team & Design Leadership
Enterprise Digital Product Office (EDPO)
Optum / UnitedHealth Group, India

Subject: Application for Senior UX/CX Designer (Job Number: 2382561)

Dear Optum Design & Product Team,

I am writing to express my strong interest in the **Senior UX/CX Designer** role within Optum's Enterprise Digital Product Office (EDPO). With over 6 years of experience operating at the intersection of business strategy, human-centered design, and production frontend engineering, I specialize in taking complex enterprise challenges and transforming them into accessible, scalable, and high-conversion digital experiences.

My titles have been design and engineering roles, but I've owned product decisions end to end at Commerce Agents.

Optum’s mission to make healthcare simpler and more effective through enterprise digital products aligns directly with my product design background:

- **Enterprise Discovery & U.S. Stakeholder Alignment:** At Parla Retail, I worked directly with U.S. clients at Nebraska Furniture Mart (NFM) to solve showroom drop-offs for high-value purchases. By designing the Show & Sell consultation experience (video, screen-sharing, in-call checkout) and an integrated appointment scheduler with calendar sync and automated reminders, our pilot funnels achieved a **+31% lift in booking completion and a −26% drop-off reduction** (directional, measured against early wireframe benchmarks).
- **Complex 0→1 Product Decisions & Delivery:** At Commerce Agents, when building Sivakasi’s first food ordering suite (Vidya’s Kitchen), a conventional menu-driven WhatsApp bot failed on natural sentences. Rather than guessing, I framed this into testable bets: shipping two distinct doors (a responsive PWA and a one-sentence WhatsApp ordering channel), with AI drafting orders while deterministic server logic controlled pricing. Every misroute was captured and reproduced in tests before being verified as resolved.
- **Figma Design Systems & Dev Mode Handoff:** As a Design Engineer proficient in Figma (components, variables, auto layout, tokens, shared libraries), I partner closely with engineering squads to eliminate handoff friction and ensure design tokens map directly to production code, maintaining high standards of accessibility and performance.
- **Responsible AI & Human-in-the-Loop Governance:** For We Two Pets (wetwopets.com), I architected an editorial platform powered by autonomous AI agents paired with a mandatory 2-human curation voting desk before publishing to reduce hallucination risk, ensure product legitimacy, and verify availability.

With a B.Tech in Information Technology from Loyola-ICAM College of Engineering and Technology, a continuous history of mentoring 100+ students at FITA Academy, and extensive hands-on experience driving 0→1 product decisions, I look forward to contributing to Optum's digital transformation initiatives across web and mobile platforms.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my user experience design and technical skillset can support the objectives of Optum's EDPO team.

Sincerely,

Santhosh A
