

UI design system

Customer PWA · Driver app · Kitchen dashboard

This PDF is the interface as it is built, not a proposal. Colors, type, and shapes are taken from the product tokens. Outfit is the UI face on all three surfaces. PDF text is Helvetica because the font file is not embedded.

Customer PWA

Light glass, kitchen red

Driver app

Dark, high contrast outdoors

Dashboard

Dark desk, yellow for action

How the three surfaces differ

Same brand, three jobs. The customer is choosing food at home, so the app is light, soft, and red. The driver is on a bike in daylight, so the app is near-black with a brighter red and large status colors. The kitchen sits at a desk for hours, so the dashboard is dark with yellow reserved for the thing they should tap.

- Typeface on every surface: Outfit. Weights in use run from 500 body copy to 800 titles and 900 prices.
- JetBrains Mono and Caveat are loaded on the site. They are not the UI face of these three apps.
- Customer icons are Phosphor. Driver and dashboard icons are Lucide.
- Customer and driver are phone-first. The dashboard is a desktop board with a collapsed sidebar.
- Do not reuse the customer red (#BD2320) on the driver app. The driver red is #E84040 so it stays readable on black in sun.
- Do not use dashboard yellow on the customer app. Yellow means “this control is on” for the kitchen only.

Shared shape

- Customer cards and sheets use large radii: 20–28px. Primary buttons are 18px. Chips and pills are full pills.
- Driver cards are 16px, controls 14px, chips are full pills.
- Dashboard cards and nav items are 12px. Inputs and small buttons are 8px.
- Touch targets on phone surfaces stay around 44–52px tall.

1. Customer PWA

Light glass on a warm gray canvas. The brand color is the kitchen red. Prices and primary actions use that red. Most text is near-black, not pure black. Surfaces are translucent white so the page feels like paper, not a dashboard.

Color

	Canvas #F5F5F7		Text #1A1A1A
	Brand red #BD2320		White #FFFFFF
	Success #22C55E		Star / rating #FBBF24

Secondary text is black at 65% opacity. Captions and eyebrows are black at 42%. Borders are black at 6%. Red tints: 8% fill, 18% border, 25% glow. Glass surfaces are white at 72% and 88%.

The phone status bar theme color is #0D0D0D. The page itself stays light. That dark chrome is the browser edge, not a dark app.

Type scale

Role	Size	Weight	Use
Display	36	800	Greeting, splash name
Hero	30	800	Order reference, featured price
Title	24	800	Checkout, menu, dish
Sheet title	20–22	800–900	Size picker, OTP
Section	17	800	Your order, delivery to
Card / dish	16–18	700	Dish name on a card
Body	15	500	Descriptions
Label	15	700	Field labels
Input	17	600	What the customer types
Caption	13	600	Helper text
Eyebrow	11–12	700–900	Uppercase labels
Price	16–24	900	Always heavy. Large prices in red
Button	15–16	800–900	Primary actions
Micro chip	10–12	700–800	Badges, discount chips

Components

- Primary button: red fill, white label, height about 52, radius 18, red glow shadow.
- Size card: white or red-tinted when selected, radius 22, 1.5px border. Selected border is brand red.
- Bottom sheet: radius 28 on the top corners, grab handle 36×4, gray at 12%.
- Menu card image sits above the name. Price is red, weight 900. “Starting from” is 13px, black at 45%.
- Success (OTP, location marked): green #22C55E, a round icon ring, and a white pill chip.
- Favorite heart: red when saved, otherwise black at 42%.
- Bills: food, packaging, delivery, and GST are separate lines. The amount due is 22px, weight 900, red.

2. Driver app

Built to be read outdoors. The canvas is almost black. Text is white. Status colors are louder than the customer app: a brighter red, a clear green, and amber. The installed app name is “VK's Driver”. Its status-bar theme color is the customer red #BD2320, while the screen background is #0A0A0A.

Color

	Canvas #0A0A0A		Card #141414
	Text #FFFFFF		Action red #E84040
	Delivered #34D469		Waiting / cash #F5A623

Muted text is white at 46%. Faint text is white at 28%. Borders are white at 7% and 12%. Each status color has a 10% tint for chips and icon wells.

Type and shape

- Same Outfit family. Job titles and customer names stay large enough to read on a bike stop. Do not drop body text under 14px.
- Cards radius 16. Controls radius 14. Status chips are full pills.
- Icons are Lucide, about 20px. Status icons: package, clock, cash, bike, check, alert.
- A cash order that is not yet paid is called out in amber, not hidden inside the total.
- Primary destructive or “problem” states use #E84040. Completed delivery uses #34D469.

Screens this system covers

- Sign in.
- Job list: address, slot, dish photo, cash still to collect.
- One delivery: navigate, call, mark delivered or not delivered.

3. Kitchen dashboard

A dark desk for a long shift. Yellow is the only loud color, and it is reserved for the active nav item and the main action. Green means something is live. Red means turn off or delete. Body text is gray, not white, so a full board does not glare.

Color

	Page #0D0D0D		Panel #141414
	Card #1A1A1A		Input #222222
	Action yellow #F5E32D		Live green #86EFAC

Nav idle text is #888888. Hover row is #1A1A1A with #CCCCCC text. Active nav is yellow fill with black text and black icon. Panel border is #222222. Card border is #2A2A2A. Errors are #FCA5A5 on a dark red field. Turn-off actions use #F87171. A secondary amber #F5A623 appears on charts and progress, next to yellow.

Type and layout

- Outfit throughout. Page title about 16–22px, weight 800. Section titles 15px, weight 700. Labels 11px, weight 700, uppercase, letterspaced.
- Sidebar 240px, or 72px when collapsed. Nav row min height 44, radius 12, icon 20.
- Content sits on a #141414 panel with a 14–20px radius. Inner cards are #1A1A1A, radius 12.
- Inputs: #222222 fill, #2A2A2A border, radius 8, 14px white text.
- Primary button: transparent fill, yellow 1px border at 40% opacity, yellow label, radius 8–10.
- Live state: green border tint and green icon. Off state: gray icon, “Turn on” in green.
- Loading is one yellow ring on the dark panel. A page does not show two spinners.

Dashboard areas

- Live orders, revenue, AI pricing, offers, drivers, reviews, complaints.
- AI pricing cards suggest. They do not change a price until the kitchen approves.
- Offers and the delivery discount use the same card, the same yellow save button, and the same green live state.

Use this, not a mix

Role	Size	Weight	Use
Customer button	52 tall	800	Red fill, white type, radius 18
Driver status	pill	700	Red, green, or amber on near-black
Dashboard action	32–36	700	Yellow text, yellow hairline, radius 8
Customer sheet	—	—	Top radius 28, light canvas
Dashboard card	—	—	Radius 12, #1A1A1A on #141414
Price, customer	16–24	900	Red when it is the amount to notice
Money, kitchen	14	700	White or yellow, never customer-red

Do

- Keep one primary color per surface: red, brighter red, or yellow.
- Write bills as separate lines. Never hide GST inside a single “charges” number on the customer app.
- Use weight 800–900 for the number the person must act on. Use 500 for explanation.
- Keep phone controls at least 44px tall.

Do not

- Do not put the dashboard yellow button on the customer menu.
- Do not put the light glass customer card on the driver job list.
- Do not use pure black #000000 as body text on the customer app. Use #1A1A1A.
- Do not introduce a second font for buttons or prices.

Source: mobile-design-tokens.ts, mobile-typography.ts, driver-theme.ts, and the dashboard chrome (sidebar, offers, orders). If a screen invents a one-off color, match the nearest token here instead of adding a new one.
